

HIRING PROCESS ANALYTICS

Project Description:

In this project, we are supposed to make a detailed report of hiring happened in the past for the hiring department so that they can make important decisions based on my insights. This will help different departments in hiring new freshers or any other individual.

Steps For EDA:

1. Understanding data columns and data
2. Checking for missing data
3. Clubbing columns with multiple categories
4. Checking for outliers
5. Removing outliers
6. Drawing Data Summary

Approach:

For this project I have used excel to clean the data at first and then remove the blank or missing data then I have checked for the outlier after finding mean, median, Q1, Q2 and Q3. I have used various pivots and charts to show the detailed report.

Tech-Stack Used:

I have used MS Excel to perform the complete analysis, Snipping tool to take the screenshot of the report and MS Word to make the project more attractive.

Insights and Results:

While doing this project I have learnt how to clean raw data, how to find mean, median, mode and outliers. I have also learnt to make detailed reports on MS Excel using pivot and charts.

While doing this project I have also learnt how companies hire new employees after performing such research.
